

Noah Nefsky

noahnefsky@gmail.com | noahnefsky.com | github.com/noahnefsky

Skills

- **Software:** Python, Typescript, C++, FastAPI, AWS, Node.js, React, Next.js
 - **AI:** Information Retrieval, Harness building, Agentic Evaluations, Langgraph, Langsmith, Scikit-learn, PyTorch
-

Work Experience

Founding Forward Deployed Engineer | Tavily (acquired by Nebius Group), New York City July 2025-present

- Worked with **Fortune 100-500** companies on pre and post-sales to **build agents, custom search indices, evaluations and educate** teams, earning **~\$4M in new POC-driven revenue** and accelerated production rollouts
- Developed the [Tavily Research API](#), ranking first on HuggingFace's DeepResearchBench, adopted by **tens of thousands of users** including Fortune 100-500 companies, earning the business **\$3 million in revenue** in 10 months
- As a founding member of the FDE team, I **designed the interview process, hired and trained FDEs** - growing the team to 10 people and ARR from **~\$1M to ~\$40M**, ultimately leading to a **\$400M acquisition**
- Built the **POC process and trained FDEs** to do discovery to replicate customer environments, use technical primitives to improve results, and leverage R&D/Product to win technical evaluations, **growing the POC win rate to 80%**
- Designed the process for FDEs to **build customer-specific features and indices** into the core product, improving search outcomes for key use cases, which **drove multi-million-dollar upsells**
- Built an agentic web content-cleaning pipeline **cutting reranking token spend by 25%**
- Delivered [technical talks](#) and [webinars](#) to developers on building research agents - driving adoption and visibility

Software Engineer | Squint AI, San Francisco June 2024 - December 2024

- Led the development of role-based access controls using **React/Node/SQL**, enabling admin to restrict factory procedures and documents to user groups - a critical feature enabling the **signing of the company's largest customer**
- Built a product using **Three.js** and **neural networks** to transform videos of factory spaces into interactive 3D scenes - enabling remote training for factory operators
- Built a procedure management system in **React/Node** enabling users to create customized procedures, branch existing procedures into drafts and track performance - improving efficiency and minimizing downtime for factories

Software Engineer Intern | PointClickCare, Toronto September 2023 - January 2024

- Developed an **AI warning system** for patient health records highlighting alarming data to the practitioner, suggesting next steps (additional tests, people to contact, etc) - improving care and responsiveness
- Implemented mobile features like drug disposal tracking and health record messaging in **Flutter** and **Android**

Junior Software Developer | Grantmatch, Toronto May 2023 - August 2023

- Used **Langchain** and **NLP** to auto-complete grant application forms - reducing user filing from hours to minutes
- Implemented notifications for a grant filing approval platform using **Django** and **Vue.js**, improving user responsiveness

Software Engineer Intern | Thoughtwire, Toronto May 2022 - August 2022

Junior Software Engineer | Sparcblock, Toronto May 2021 - August 2021

- Developed integrations with 5 accounting services to automate vendor payments - enabling the signing of **3 customers**
-

Education

University of Waterloo September 2020 - April 2025

- Honours bachelor of Computer Science (co-op) with Economics Minor

Swiss Federal Institute of Technology Lausanne (EPFL), Switzerland February 2024 - June 2024

- **Master's Level Courses:** Computer Vision (**NumPy and PyTorch**), Data Visualization, Economics
-

Projects

AI Sales Qualifier (Typescript, React, Node.js)

- Built AI voice agents to qualify and score leads from call transcripts - **winning 1st place in an AI hackathon**

Jubilee AI ML Engineer (Python, Langgraph, PyTorch, Scikit-learn, skills)

- Built an autonomous ML engineer that builds datasets, and trains models - **placing 4th in a Kaggle competition**

Patient Diagnosis (Python, Spark, Palantir Foundry, PyTorch)

- Built a pipeline that **indexes 100K+ unstructured clinical notes** and uses **RAG + ML** to predict diagnoses
